OCTOBER 9, 2026

AI learning is becoming a systems question

The week ends with a broader pattern: AI education is no longer just about classroom use. It now stretches across open universities, procurement, teacher workload, student safeguards, and lifelong learning.

 **Listen · 5:13**

Open universities put AI into the human-capital agenda

Universitas Terbuka's graduate school used FUSION 2026 to connect artificial intelligence with sustainable innovation, public policy, lifelong learning, and human capital development. The forum brought researchers, students, and industry practitioners together around digital transformation and cross-sector collaboration, according to [Jakarta Globe](#).

That framing is important because it moves AI education beyond school-age learners. The emerging question is how education systems support people as AI reshapes work, citizenship, research, and public services over a lifetime.

“

AI literacy is no longer a school subject alone; it is becoming an infrastructure layer for lifelong learning.

Evidence now has to support system decisions

District AI spending needs better filters

US districts are being asked to judge privacy, explainability, bias, student-data ownership, and learning value while vendors move faster than state and federal guidance. [Education Week](#).

Teacher demand points to purpose-built AI

Sanoma's European Teacher Survey found 75% to 93% of teachers want AI tools designed for education, not adapted from general-purpose applications. [Yahoo Finance](#).

Living labs turn adoption into inquiry

Penn GSE's Living Laboratory for Human Agency and AI is designed to test AI tools, governance, pedagogy, and literacy strategies in real education settings. [Newswise](#).

3

Nordic focus

Nordic focus: teacher control remains the through-line

🇫🇮 FINLAND Sanoma Learning's Sanna assistant, developed by a Helsinki-based company, is built on local learning materials and national curricula, with trials in Finland, Sweden, and other European markets. [Yahoo Finance](#).

🇳🇴 NORWAY Norway's debate remains shaped by rapid AI uptake and concern over when children should meet AI, with earlier reporting showing high use across both primary/lower-secondary and upper-secondary schools. [VG](#).

🇳🇴 NORWAY Bodo's role in the European AI Academy keeps Norway in the curriculum-building lane, testing responsible use, teacher networks, and age-appropriate classroom practice. [NRK](#).

4

Around the globe

Around the world, AI readiness is being formalized

🇮🇩 **INDONESIA** Universitas Terbuka's FUSION 2026 framed AI alongside lifelong learning and human capital, a signal that adult and open learning are entering the mainstream AI education agenda. [Jakarta Globe](#).

🇰🇪 **KENYA** UNESCO and Codemao's youth coding initiative has trained more than 1,200 Kenyan students and established coding clubs in 20 schools. [Xinhua](#).

🇻🇳 **VIETNAM** Vietnam's national AI education framework sets 12 core periods per grade each year, with schools choosing modules, subject integration, or elective activities. [Vietnamnet](#).

🇺🇸 **US** New York City is keeping student-facing generative AI out through eighth grade while requiring high-school AI literacy modules and allowing selected supervised pilots. [International Business Times Singapore](#).

🇮🇳 **INDIA** The Millennium AI Creators Championship named student winners in storytelling, song, and short-film challenges tied to sustainable cities and responsible AI. [LatestLY](#).

🇦🇪 **UAE** Alef Education is showcasing responsible AI-powered learning at Ai Everything Abu Dhabi 2026, pairing personalization with safety and trust language. [Emirates News Agency on MSN](#).

Tools are being judged by institutional fit

Teacher assistants move into curriculum territory

Sanna supports lesson planning, assignments, feedback, differentiated materials, and presentations while keeping teachers in review and approval.

[Yahoo Finance](#)

Procurement checklists become learning safeguards

Districts are asking whether AI tools are accessible, explainable, grounded in learning science, and safe with student data before deployment.

[Education Week](#)

Living labs make tool adoption testable

Penn GSE's model treats AI tools and practices as hypotheses to test with educators and students, not finished answers.

[Newswise](#)

What to watch next

Adult learning becomes a frontline AI issue

Open universities and graduate schools may become the most important sites for AI reskilling.

Procurement becomes pedagogy

The tools schools buy will shape which learning behaviors are automated, measured, and rewarded.

Age-banded policy gains momentum

Expect more systems to separate rules for younger students, high school pilots, and adult learners.
