SEPTEMBER 28, 2026

The week AI safety widened beyond school rules.

The clearest pattern is no longer whether schools allow AI. Courts, provinces, school systems, and platform evaluators are all asking who is responsible for age-appropriate defaults, evidence trails, and student-safe design.

 **Listen · 4:50**

British Columbia keeps school AI safety in the courts.

The Guardian and Ars Technica reported that British Columbia sued OpenAI and Sam Altman after a school shooting, alleging the company should have warned law enforcement when dangerous conversations were flagged.

The case remains the week's defining education-AI development because it moves the safety boundary upstream. District policies and classroom rules matter, but the question now includes platform escalation duties, auditability, model instructions, and what happens when risk signals appear before a school ever sees them.

“

The AI safety perimeter is no longer the classroom. It is the whole system around the classroom.

Evidence is converging on inspectable AI use.

AI search still needs student-safe defaults.

A Youth AI Safety Institute assessment found Perplexity was not a safer choice for children than Google, citing crisis-response gaps, adult-like treatment of teen users, homework answer-giving, and uneven source quality. EdTech Innovation Hub.

AI-ready schools need governance maturity.

Indian school leaders argued that AI readiness requires leadership vision, curriculum alignment, teacher capacity, assessment reform, and written governance rather than simply adopting tools. [ET Education](#).

Teacher AI literacy can be embedded in normal professional learning.

Edutopia recommends small routines — prompt transparency, image citation, modeling tool use, and AI-assisted handouts — to build capacity without waiting for a dedicated AI workshop. [Edutopia](#).

3

Nordic focus

The Nordic line still emphasizes age, privacy, and proof.

🇳🇴 **NORWAY** Norway remains the European reference point for age-gating after its primary-school generative-AI ban; [Euronews](#) noted the move exposed gaps in wider EU rules.

🇳🇴 **OSLO** Oslo's ban on camera-equipped AI smart glasses in schools keeps ambient data capture and consent on the Nordic agenda. [The Local Norway](#).

🇩🇰 **DENMARK** Denmark's oral-defense requirement remains the clearest proof-of-learning model for AI-era written work. [Euronews](#).

4

Around the globe

What else moved this week.

🇦🇪 **UAE** Abu Dhabi advanced AI Literacy across more than 170 private schools, with curriculum, an AI Growth Test, teacher training, and

safeguards for cognitive agency and privacy. [Emirates 24/7](#)

🇮🇳 **INDIA** NCR school leaders called for AI governance committees, written policies, risk classification, teacher mentorship, and student-led innovation. [ET Education](#)

🇺🇸 **US** Marietta City Schools launched a MagicSchool AI pilot focused on data security, teacher support, and digital literacy. [WTAP](#)

🇨🇦 **CANADA** New Brunswick's K–12 AI curriculum debate continued, drawing praise for readiness and pushback over age and implementation. [CBC on MSN](#)

🇻🇳 **VIETNAM** Hanoi's Grade 1–12 AI plan remains a major citywide rollout, with 12 core lessons and no separate grades to reduce pressure. [Tuoi Tre](#)

Tools are being judged by their defaults.

AI search is now an education-safety category.

The Perplexity assessment shows that source citations and academic modes are not enough when minors receive adult-like responses or full homework solutions.

[EdTech Innovation Hub](#)

Purpose-built classroom tools get a privacy advantage.

Marietta chose MagicSchool AI because it wanted classroom support with stronger data protections than open consumer chatbots.

WTAP

Teacher tools are moving from productivity to pedagogy.

Edutopia's guidance frames AI as something educators can model transparently while teaching source judgment and disclosure.

Edutopia

Three patterns to track.

Platform duty-of-care will shape school procurement.

Expect more questions about escalation, audit trails, and law-enforcement thresholds when schools evaluate AI vendors.

AI literacy is becoming measurable infrastructure.

Frameworks such as Abu Dhabi's make AI capability a progression that can be taught, assessed, and supported.

Process evidence remains the trust layer.

Oral defenses, source trails, inquiry logs, and teacher dashboards help educators inspect learning, not just outputs.
